

Key Control Management and
Guard Tour Solutions

think inside the box.

think inside the box.

KeyWatcher® Touch and KeyWatcher® Illuminated Systems are the modular, scalable solutions designed for interoperability with your other physical and logical security systems. Access to the cabinets and to individual keys is under your complete control. You decide who has permission to remove each key, and with KeyWatcher Systems' advanced communications capabilities, you always know who removed any key and when it was taken.

Watch our corporate video

Configure your KeyWatcher System with the exact components you need, including card slots and lockers of various sizes, with the ability to change modules when you need to. Choose the cabinet access that best suits your needs – including a fingerprint reader, keypad and more.

It's the solution that gives you more value, more storage and more convenient accessibility.

Morse Watchmans: key control for more secure facilities

Every facility is safer with the addition of a key control and management system from Morse Watchmans. Physical keys continue to be mission-critical for every type of organization, and Morse Watchmans is dedicated to delivering the best solutions for managing, controlling, tracking and auditing all your keys.

KeyWatcher Touch and KeyWatcher Illuminated Systems are the access control solution for physical keys. Every key is accounted for at all times, with full tracking, reporting and alerts for your defined incidents.

SmartKey™ Locker Systems deliver the same level of accountability for small assets including weapons, cash trays and more. And for secure keys without the need for individual accountability, KeyBank® and KeyBank® Touch provide a cost effective solution.

Security innovation from Morse Watchmans goes beyond key and asset security, too. Our PowerCheck® system has been adding value to guard tours for over 15 years, helping you to minimize risk.

At Morse Watchmans, we are committed to bringing you more ways to keep your enterprise, and your facility, safer. That's our outside the box thinking – that you'll find right inside the box.

KeyWatcher is ideal for:

- Casino and gaming industries
- Correctional facilities
- Healthcare facilities
- Hotels and resorts
- Conference centers
- Government agencies
- Multifamily buildings
- Control rooms
- Corporate buildings
- Educational institutions
- Automotive businesses

KeyWatcher Touch: security plus convenience at your fingertips

We've got the Touch.

The KeyWatcher Touch is a powerful key control and management system with touch screen convenience for enterprise-level to SMB applications. The large 7" interface offers step by step instructions to the user. KeyAnywhere saves time by allowing you to return a key to any KeyWatcher in your enterprise, while KeyFind lets you locate which KeyWatcher a specific key is in, or determine who has it out. Keys available to a user can easily and quickly be called up

on the screen. Key reservations and notes can now easily be entered on the screen. The unified KeyWatcher Site design allows a network of KeyWatcher Touch systems to share a single database, which can accommodate more than 14,000 keys and over 10,000 users. All control and management of the system, including programming, remote functions and reporting is managed via KeyWatcher TrueTouch software.

Now available in a sleek, durable dark grey color!

Store, control and track keys with KeyWatcher Illuminated

KeyWatcher Touch and KeyWatcher Illuminated: Features and Options

- Easily identify the correct keys
- Return keys to any location
- Rugged, functional design uses less wall space
- User interface controls various access devices
- Ergonomic design offers ease of use
- Backed by industry-leading warranties
- Alarm and access control integration capability
- USB connectivity
- Built-in Ethernet
- AC-powered with 48-hour backup battery

Built into a rugged steel cabinet, KeyWatcher Illuminated offers many of the same features and benefits as the KeyWatcher Touch. Illuminated key slots light up on access to make it easy to locate keys for which the user is authorized. The exterior design of the cabinet has been enhanced to blend in with today's office environments, while the key control system seamlessly controls and monitors keys. A Random Key Return feature allows users to return

keys to any open location in the cabinet and the system will remember the new location for that key. This avoids confusion or misplacement error – a real time saver and convenience to each user. There is also an option available for users who prefer keys to be returned to their original location. Authorized users can even reserve a key in the system for a specified timeframe, providing a convenient way to guarantee access when a key is needed.

think inside the box.

KeyBank and KeyBank Touch

When all key users have permission to access every key in the cabinet, KeyBank and KeyBank Touch deliver the same cabinet security with identity-based access permission, tracking and auditing as the KeyWatcher systems. KeyBank systems are an economical, practical solution for key storage in applications including:

- Multi-family housing facilities
- Retirement complexes
- Healthcare facilities
- Conference centers
- Control rooms
- Educational institutions
- Residential hotels
- Hotels and resorts
- Government agencies
- Corporate buildings
- Automotive businesses

Lock up your assets with SmartKey Locker Systems

Secure, control and track larger objects like laptop computers, cash trays and 2-way radios as efficiently as keys. It is easy to set up SmartKey Locker systems as a personal storage space for one or multiple users. Items can be returned to any open locker for convenience.

SmartKey Locker Systems are available in a variety of configurations for assets of different sizes and shapes – all customizable, scalable and engineered for complete interactivity with your other business systems.

Advanced software optimizes performance capabilities and ROI

Maximize your KeyWatcher system with user-friendly software. KeyWatcher TrueTouch software for KeyWatcher Touch runs all programming, remote functions and reports for all KeyWatcher Touch locations while the KeyWatcher Touch server performs synchronizations of transactions as well as maintaining the SQL database. Both access control systems and customized client control software interface with the server application.

Both TrueTouch and Key-Pro software for KeyWatcher Illuminated systems are PC applications with remote access capabilities. Both packages enable system managers to establish permission levels for each User Code and monitor data from any desktop connected to the network.

Generate reports by:

- List of keys
- Users
- Keys in use
- Keys removed
- Keys overdue
- And more

TrueTouch and Key-Pro Performance Software provide:

- Detailed key management reporting options
- Centralized programming
- Advanced network capabilities
- Improved system communications
- Exclusive real-time transaction polling
- Priority e-mail alerts
- Real-time transactions screens
- Audible alarm notifications

Morse Watchmans' software for KeyWatcher systems enhances the installation, programming, customizing, maintaining, status, alarms and reporting capabilities of each system with real-time polling transactions. System control is faster and easier.

The software can run activity reports, sort based on different criteria, view and print reports, and more. System managers can generate practical management reports, which trace key movements by time, date and user code. An audit trail report indicates the time and date of every key accessed by a user for a given time parameter.

Another key feature of the software is the built-in scheduler. This tool automatically downloads all data to a secure PC, allowing system managers to sort and analyze the information so they maintain maximum control of access and security issues.

Ready to communicate

All of our KeyWatcher systems are engineered for complete interactivity with your other business systems. By opening our protocols to a wide range of integration partners, Morse Watchmans makes it possible for you to implement connectivity across systems on any level you choose. For example, when you integrate your KeyWatcher system with your access control system, a user who has taken a specific key from a KeyWatcher can be denied egress from the facility until the key is returned – and selected management can be alerted via email if this attempt is made.

By designing every KeyWatcher with the ability to communicate across systems, Morse Watchmans helps our customers maintain best-in-breed security solutions without the need to overhaul or replace costly installations.

KeyWatcher has a built-in RS-232 for direct connectivity to printers or other devices, or networked connectivity via Ethernet.

Scale up anytime with cabinets, keys, cards and lockers

It's easy to expand your KeyWatcher system as your needs grow. Start with a single cabinet, or configure a system with multiple cabinets to hold hundreds of keys and assets. Designed with scalability in mind, each additional unit can be controlled by a single console and monitored by advanced software.

KeyWatcher can hold keys of almost any size, including Folger Adam keys. You can also store, control and track access and other cards, or small assets in our single or dual

locker modules. You can even create your own customized cabinet system online using the convenient KeyWatcher Configurator at morsewatchmans.com.

Features

- Expandable to meet your key storage needs
- Customize cabinets with lockers and card holders
- 16, 8 and 6 key modules available

Control keys on the go with our new mobile app

A new smartphone app offers an efficient way to manage control of keys from smartphones. Authorized users can see a wide range of information and interact remotely with the KeyWatcher Touch system.

- Check site status from anywhere with an internet connection
- Get remote status of keys in, out and overdue
 - » By cabinet or site
 - » Supports multiple sites
- Add or modify user information
- View/cancel alarms on the system
- View the latest transactions in the system

Added security for your assets

KeyWatcher Illuminated and KeyWatcher Touch have numerous assignable user codes per system with PINs (Personal Identification Numbers). KeyWatcher systems provide a high level of security. Management can appoint one of five different levels of access for each employee, adding flexibility as well.

Built stainless steel tough, the cabinet is designed to resist abuse and is wired with a mechanism that triggers an alarm which can be wired to sound throughout the facility and other devices if:

- A user tries to gain access to or dislodge a key with force
- An invalid user code is entered three times consecutively (systems go into an automatic alert mode and lock down for four minutes)
- The door is left open
- A key is missing or not returned on time
- There is a power failure
- A key is returned by the wrong user
- A user forces the cabinet doors open

Any PC with speakers running Key-Pro or TrueTouch software can emit an alarm as well, and alarms can be sent automatically via email to designated managers.

Smart keys add intelligence to your system

All keys secured within a KeyWatcher system are locked to a Smart Key device with built-in memory chip. Any time a Smart Key is inserted into or removed from a KeyWatcher key slot, the system stores data on time, user and more.

think inside the box.

Tamper-proof KeyRings™

KeyRings™ provide a convenient, tamper-proof locking mechanism along with a unique identification system. It is easy to add or remove keys with no need to cut through and destroy the stainless steel ring. Morse Watchmans' economical Replaceable Hub Technology lets you re-use the more valuable ring and simply replace the colored hub. Simple to work and easy to use, tamper-proof KeyRings add security and value.

- Reusable 5/32" stainless steel rings
- Smart-switch solution replaces welded and crimped rings
- Incorporates cost-saving Replaceable Hub Technology
- Serialized/color-coded hubs identify rings and prevent substitution

PowerCheck all-in-one hand-held data recorder

Add value to your guard tours with Morse Watchmans' PowerCheck. Designed to help prevent liability and costly losses from vandalism, theft, espionage and accidents, PowerCheck gives your security officers a tool to document incidents and risky conditions. Officers can input user-programmable codes on the convenient keypad as they make their rounds, saving time and reducing paperwork. Auto Pilot guides officers from station to station, while Random Tour allows them to go to stations in any order they prefer.

The handheld data recorder is sleek, lightweight, completely self-contained, and will function in temperatures ranging

from -40° to 140°. Shock and water-resistant, the data recorder has a resilient outer shell made from Lexan®, along with a rechargeable battery and recharging base unit.

Our checkpoint stations are as rugged and durable as the PowerCheck recorder. Unlike many other systems, these will withstand rough usage and won't fade in the sun or fail in rainy conditions. Even if the surface has been vandalized, the stations will still function. And we stand behind this quality product with a lifetime guarantee.

think inside the box.

CUSTOMER SERVICE

Morse Watchmans has earned its reputation with our commitment to customer service and total satisfaction. Every KeyWatcher, KeyBank and Guard Tour system is backed by an exclusive two-year warranty on all parts. It's all about key control, security and service.
